

DID YOU KNOW...

that one of the many services *MIDWEST Electrical Testing* offers is **INFRARED SCANNING?**

This service includes the following:

- Infrared Scan of the entire main electrical power distribution system.
- Ultrasonic Scan of equipment operating at 600 Volts and higher.
- Engineering analysis of the potential problems found.
- A Complete Report with the following:
 - Infrared and real life photographs of each problem detected.
 - An analysis and recommendation for correction of each potential problem.
 - A "Routing List" of all the areas and equipment scanned.

MIDWEST can also provide personnel to remove panels and open covers during the Infrared Scan. We can repair problems found with the Infrared. We can check circuits for loading and harmonics, if you wish.

If you would like a quotation on the above services, please contact us at 414.931.0992. Thank you.
